

E179T compact VV on Nissan Cabstar 3,5T wheelbase 3400

All moving hoses and cables are located inside the boom for total protection. The multidirectional hydraulic controls are designed to withstand heavy duty work and allow simultaneous and extremely accurate movements.

The E179T's light but rigid structure allows the operator to work in full comfort even at the maximum height/outreach angle.

This machine can be stabilised right between two parked cars or along a busy road without interfering with the traffic and with no need to cone-off the road, thanks to its vertical outriggers of 2.15m spread.

Always use the sole-boards (stabilisers plates) for your safety and comfort.
